

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

1. (Currently Amended) A disposable dental syringe kit, for use with a double ended dental needle comprising a needle extending through an attachment portion, said kit comprising:

a flexible conduit comprising a proximal end and a distal end, said conduit adapted for carrying anesthetic fluid, from a source of anesthetic which is in fluidic communication with said proximal end of said conduit, to a needle handle;

a needle handle connected to said flexible conduit proximate said distal end of said conduit, said flexible conduit connected proximate a proximal end of said needle handle,

a needle handle comprising a generally proximal bore portion in fluidic communication with said distal end of said conduit, said needle handle also comprising a distal bore portion for receiving the proximal end of a double ended needle, a connector for connecting an attachment portion of a double ended needle to the needle handle thereby placing the flexible conduit in fluidic communication with a needle, and a pierceable seal through which a needle is placed when connecting a double ended needle to said needle handle.

2. (Original) A disposable syringe kit according to claim 1 wherein said seal comprises a rubber-like material.
3. (Original) A disposable syringe kit according to claim 2 wherein said seal is generally cylindrical.
4. (Original) A disposable syringe kit according to claim 2 wherein said seal is generally ovoid.
5. (Original) A disposable syringe kit according to claim 2 wherein said seal is generally rectangular.
6. (Original) A disposable syringe kit according to claim 2 wherein said seal is generally flat.
7. (Original) A disposable dental syringe kit according to claim 2 wherein said seal is snugly received in a recess in said needle handle which forms an interference fit with said seal.
8. (Original) A disposable syringe kit according to claim 3 wherein said seal is secured to said needle handle with an adhesive.
9. (Original) A disposable syringe kit according to claim 8 wherein said adhesive is soluble in dental anesthetic.
10. (Original) A disposable syringe kit according to claim 1 wherein said seal is generally cylindrical.

11. (Original) A disposable syringe kit according to claim 1 wherein said seal is generally ovoid.
12. (Original) A disposable syringe kit according to claim 1 wherein said seal is generally rectangular.
13. (Original) A disposable syringe kit according to claim 1 wherein said seal is generally flat.
14. (Original) A disposable syringe kit according to claim 1 wherein said seal is secured to said needle handle with an adhesive.
15. (Original) A disposable syringe kit according to claim 8 wherein said adhesive is soluble in local dental anesthetic.
16. (Original) A disposable syringe kit according to claim 1 wherein said connector comprises a resilient sloped surface which is contacted by an attachment portion of a double ended needle during attachment of a double ended needle to said needle handle.
17. (Original) A disposable syringe kit according to claim 16 wherein at least a portion of said needle handle is compressed during attachment of a double ended needle to said needle handle.
18. (Original) A disposable syringe kit according to claim 16 wherein a portion of said needle handle adjacent said seal is compressed during attachment of a double ended needle to said needle handle.

19. (Original) A disposable syringe kit according to claim 16 comprising at least one recess adjacent said seal.
20. (Original) A disposable syringe kit according to claim 19 comprising at least two recesses adjacent said seal.
21. (Original) A disposable syringe kit according to claim 19 wherein said seal is located in at least a portion of said recess.
22. (Previously Presented) A disposable syringe kit according to claim 19 wherein said distal bore extends proximally through said needle handle at least to a point proximal the distal-most portion of said recess.
23. (Original) A disposable syringe kit according to claim 1 wherein said connector comprises threads.
24. (Original) A disposable syringe kit according to claim 1 further comprising a handle extension removably attached to said needle handle.
25. (Original) A disposable syringe kit according to claim 1 comprising a guide comprising a bore, said guide disposed distally of said seal.
26. (Previously Presented) A disposable syringe kit according to claim 25 wherein said guide is removably positioned at least partially in said needle handle.
27. (Previously Presented) A disposable syringe kit according to claim 25 wherein said guide is removably positioned with an interference fit.

28. (Previously Presented) A disposable syringe kit according to claim 25 wherein said guide is secured to said needle handle.
29. (Previously Presented) A disposable syringe kit according to claim 25 wherein said guide is secured to said needle handle with an adhesive.
30. (Cancelled) A disposable dental syringe kit comprising:
 - a flexible conduit comprising a proximal end and a distal end;
 - a needle handle connected to a said flexible conduit proximal said distal end, and
 - a handle extension removably attached to said needle handle.
31. (Cancelled) A disposable dental syringe kit according to claim 30 wherein said handle extension is removably connected to a proximal portion of said needle handle.
32. (Cancelled) A disposable dental syringe kit according to claim 30 wherein said handle extension is threadably connected to said needle handle.
33. (Cancelled) A disposable dental syringe kit according to claim 30 wherein said handle extension is connected to said needle handle by sliding said handle extension over a portion of said needle handle.
34. (Cancelled) A disposable dental syringe kit according to claim 30 wherein said handle extension comprises a hollow portion which forms an interference fit with a portion of said needle handle.

35. (Cancelled) A disposable dental syringe kit according to claim 30 wherein said needle handle comprises a hollow portion which forms an interference fit with a portion of said handle extension.

36. (Cancelled) A dental injection apparatus comprising:

a delivery head for pumping anesthetic from a disposable cartridge of dental anesthetic, said cartridge comprising a piston and said delivery head comprising a movable plunger for moving said piston;

a cartridge holster adapted to receive a disposable cartridge of dental anesthetic, said delivery head comprising a bracket for securely and releasably connecting said cartridge holster to said delivery head.

37. (Cancelled) A dental injection apparatus according to claim 36 wherein at least a portion of said bracket extends a sufficient distance from said plunger so that a major portion of said cartridge holster can be positioned substantially between a portion of said bracket and said plunger prior to pumping.

38. (Cancelled) A dental injection apparatus according to claim 36 wherein said bracket comprises a wire.

39. (Cancelled) A dental injection apparatus according to claim 38 wherein said wire is a coated wire.

40. (Cancelled) A dental injection apparatus according to claim 38 wherein said bracket comprises a metal.

41. (Cancelled) A dental injection apparatus according to claim 38 wherein said bracket comprises stainless steel.

42. (Cancelled) A dental injection apparatus according to claim 38 wherein said bracket comprises a polymeric material.

43. (Cancelled) A dental injection apparatus according to claim 38 wherein said bracket comprises a reinforced polymeric material.

44. (Cancelled) A dental injection apparatus comprising:

a delivery head for pumping anesthetic from a disposable cartridge of dental anesthetic, said cartridge comprising a piston and said delivery head comprising a movable plunger for moving said piston;

a cartridge holster adapted to receive a disposable cartridge of dental anesthetic, said cartridge holster comprising a base with an outer surface comprising a polygonal cross section;

said delivery head comprising a recess for securely and releasably connecting said holster base to said delivery head.

45. (Cancelled) A dental injection apparatus according to claim 44 wherein said outer surface of said holster comprises a generally square cross section and said delivery head comprises a square opening and a plurality of slots which engage a plurality of the corners of said holster base to securely and releasably connect said holster to said delivery head.
